Experience

Zentrium	Business	Solution,	Remote
Full-Stack	Developer	(ASP.NET and	React)
January 2025 - Present			
- Collaborating in an agile environment with backend and frontend software engineers, enhancing team collaboration. - Developing and implementing microservices (C#) using CQRS and BFF patterns with MVC and API, significantly improving application performance and memory management. - Optimizing data retrieval with efficient SQL and LINQ queries. - Writing comprehensive unit tests using XUnit and mocking, ensuring robust endpoint testing.. - Monitoring .NET applications throughout the software life cycle, promptly resolving issues and increasing client satisfaction. - Managing AWS Redshift, EC2, S3 Buket, and DynamoDB databases. - Developing tooling applications ASP .NET and React.js like Sprint Planning App. - Developing responsive UI with React.js - Integrating APIs with UIs			

PROJECTS

Almost all the projects I have worked on have come with an NDA (Non-Disclosure Agreement). Below are my personal projects:

Ecommerce App:

Microservice ecommerce application built with ASP.NET 8 Web APIs and MVC. Includes five microservices (four APIs and one MVC consuming the APIs). Features user registration, cart management, and coupon application with role-based authorization using Microsoft Identity and JWT. Utilized RabbitMQ for inter-service communication and Azure Messaging Bus for email services.

Technologies Used: ASP.NET 8, API, MVC, Bootstrap, C#, Entity Framework, Swagger, HTML, CSS, JSON, Postman, SQL, JWT, Microsoft Identity, Git, Microservices, JavaScript

Library Management System API:

Monolithic API catering to library management needs including. Implements role-based

TECHNOLOGIES

- C# .NET
- ASP.NET WebApi
- ASP.NET MVC
- React.js
- ASP.NET CORE
- SQL
- PostgreSQL
- MySQL
- Docker
- AWS Serverless DB
- HTML
- CSS
- BFF(Backend For Frontend)
- MongoDb
- Unit Testing
- X-Unit
- Microsoft SQL Server
- HTML 5/Razor
- Unit testing
- Javascript
- Bootstrap
- Entity Framework
- ADO.NET
- Version Control with Github.
- Test-Driven Development.
- Swagger
- Postman

authorization to control user access.

Technologies Used: ASP.NET Web API, Postman, Swagger, JavaScript, JSON, SQLite, Docker, Entity Framework Core
